

The Platform for Enterprise Data Security

Delivering End-to-End Security

Qostodian is a data security and integrity assurance platform for medium to large organizations that helps you discover, understand and protect your data assets. Qostodian reduces your risk of data breaches by allowing you to monitor sensitive, protected or confidential data on any device.

With Qostodian, you will know the state of your data holdings at any given time, allowing you to take appropriate action. This awareness is achieved without forcing you to consolidate or otherwise move any data – your data stays where it belongs.

For data integrity assurance, Qostodian seamlessly integrates Immutable Ledger Technology (ILT). This exclusive capability distinguishes the platform from other offerings by assuring the integrity of your data assets in an independent, resilient and immutable manner. Combined with additional capabilities, Qostodian delivers real end-to-end security.

Discover data assets across your organization to understand and protect them

Assure the accuracy and consistency of data assets over their entire lifecycle

Monitor devices and data assets to identify issues before they impact your business

Detect device and data tampering incidents in real-time to proactively address them

Answer fundamental questions about your data assets to better risk-manage

A Feature-Rich Platform

Discover, Understand and Protect. Qostodian helps you avoid scenarios where sensitive data is improperly stored, accumulated or forgotten.

- ▶ Automatically discover and inventory your data assets from virtually any source
- ▶ Obtain a clear, comprehensive and accurate picture of your data holdings
- ▶ Get rid of overexposed and vulnerable data

Assure Data Integrity. Whether you're in charge of security, compliance or analytics, assuring the accuracy and consistency of your data is the starting point for a new world of data-centric performance.

- ▶ Implement an enterprise integrity assurance regime using scalable automation rules
- ▶ Validate the integrity of your assets in a centrally managed, independently verifiable, and irrefutable manner
- ▶ Generate detailed reporting to support litigation, satisfy customers and regulators, enable investigations and more

Monitor, Verify and Alert. Empower every IT and business user to understand and protect data assets.

- ▶ View customizable dashboards from your personal computers and mobile devices
- ▶ Search your devices for data assets using a simple, yet powerful, query system
- ▶ Automate actions, such as sending emails or triggering scripts execution
- ▶ Perform automatic or on-demand integrity verification using Qostodian's versatile agent and robust developer API

Protect your Hardware. Qostodian provides the visibility and controls needed to gain confidence in your hardware integrity.

- ▶ Leverage the Trusted Platform Module (TPM) technology to secure a wide variety of IT systems
- ▶ Protect against attacks exploiting hardware and kernel vulnerabilities
- ▶ Detect firmware modifications, unauthorized storage devices and changes to your baseline configurations
- ▶ Respond to any hardware tampering events and anomalies as they occur

Qostodian sheds light on your most valuable data holdings, releases the burdens of integrity management and reduces data and hardware security risk. It provides the visibility and controls you need for effective data integrity management across your infrastructure. The platform supports security, compliance and analytics use cases enhancing your risk management process.

Built-In Use Cases

Key Platform Features

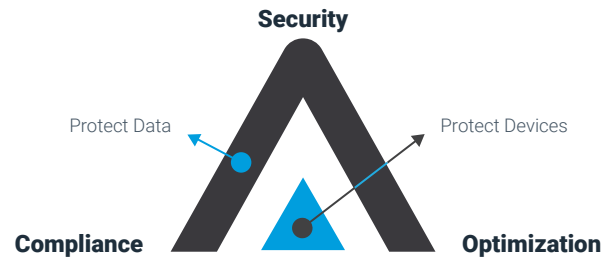

Asset Discovery – Qostodian looks for sensitive data and alerts you about overexposed or vulnerable assets

Continuous Integrity Monitoring – Real-time and automated custodianship of data assets across all devices

One Click Integrity – On-demand integrity assurance for any file seamlessly integrated in the OS context menu

Smart Queries – Powerful search engine with prebuilt queries designed for security and compliance use cases

Save Time, Lower Costs and Reduce Risks

Smart Asset Reports – Generate in-depth reports to automate repetitive compliance workflows

Role-Based Security – Robust security features including secure data handling and granular access controls

Automatic Notification – Configure email, text message, and web service notifications

Rich Developer Support – Enable developers to implement integrity, certification and verification functionalities
